Schneller Aircraft Flooring

Schneller's AerFusion *via* is an innovative all-in-one continuous flooring combining a protected, slip resistant decorative layer with a structural reinforcing composite backing in one product.

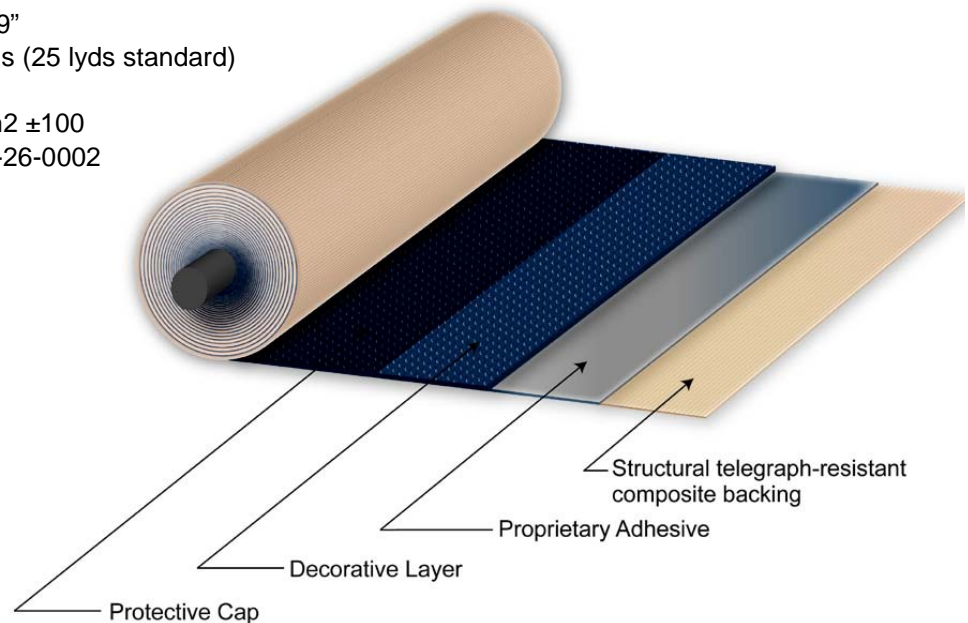

AerFusion *via*™ is the path to all-in-one aviation flooring designed specifically to meet your needs:

- Brand Identity by way of custom colors, prints, metallics and pearls
- Streamlined logistics by way of AerFusion *via*'s lightweight, all-in-one construction
- Cost-effective by way of shorter lead times, smaller lot sizes, enhanced durability, and roll form availability.
- Efficiency by way of custom fabrication – including seaming and cut-to-size
- Differentiation by way of varied texture options

AerFusion *via*™ meets the lower weight Airbus Specifications (AIMS 04-26-002).

Product Characteristics:

Roll widths	up to 59.9"
Roll lengths	10-80 lyds (25 lyds standard)
Thickness	66 mil
Weight	2100 g/m2 ±100
Specification	AIMS 04-26-0002

Lamination Process:

A decorative surface layer is continuously bonded onto a reinforcing backing that is flexible enough to enable seamless rolls and stiff enough to provide equal excellent telegraph resistance. High adhesion strength ensures durable all-in-one construction.

Installation:

AerFusion *via*™ is bonded with an adhesive to the cabin floor which has been prepared with a moisture barrier foil (Mylar) as per Airbus standard ABS5093.
