

## AerShade®

### General Information

June 2020 – Page 1 of 1

**AerShade®** Schneller provides a variety of AerShade® products to assure our customers a quality shade. Our shade enhances any interior décor. AerShade® is a durable, lightweight product which passes all FAA stringent standards. AerShade® comes in a numerous colors, textures and thicknesses - all designed to enhance the passenger experience. AerShade® helps protect your aircraft interior from damaging heat and sunlight. Our patented process prevents cracking and discoloration.

Schneller is one of the largest Tier One suppliers of window shades to OEMs worldwide.

AerShade® 2000T, -Aersshade® 2000, -AerShade® ED, -and AerShade® OE all have a very similar construction with very similar rigidity. These four types of Shade can be produced continuously or press dependent on texture desired. AerShade® T is a press product.

### Product Features

- **AerShade® 2000T** – the most rigid Shade has a well-balanced construction which improves the ability to lay-flat and drape.
- **AerShade® 2000** - the second in rigidity, Its ability to lay flat and drape are limited. This shade works best for small shades.
- **AerShade® ED** - the more flexible of our Shades .It is similar to AerShade® 2000 but has plasticizer added for flexibility. Its ability to lay flat and drape are limited. This shade works best for small shades.
- **AerShade® OE:** The Shade has the same flexibility as AerShade® ED put has added components for improved tear strength.
- **AerShade® T** - will be our most flexible and best for drape and lay flat. These are press products. AerShade® T has less opacity than AerShade 2000T but has better flexibility and drape.
